

Steps to Register via Code

1. Install the Acronis Agent

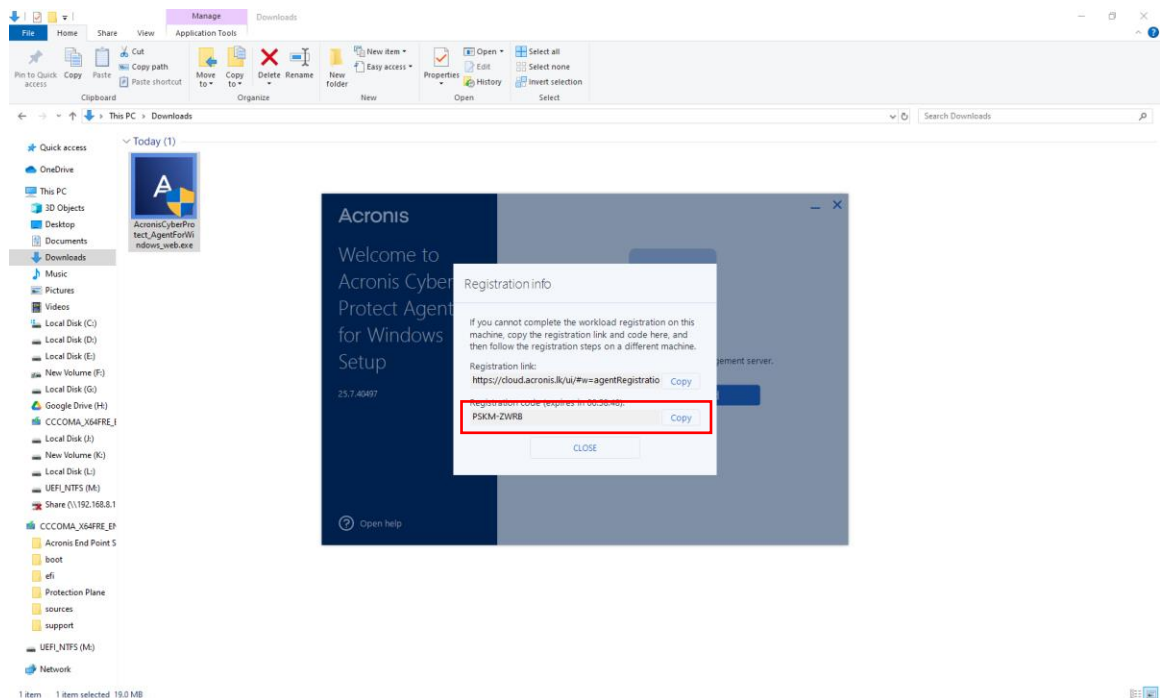

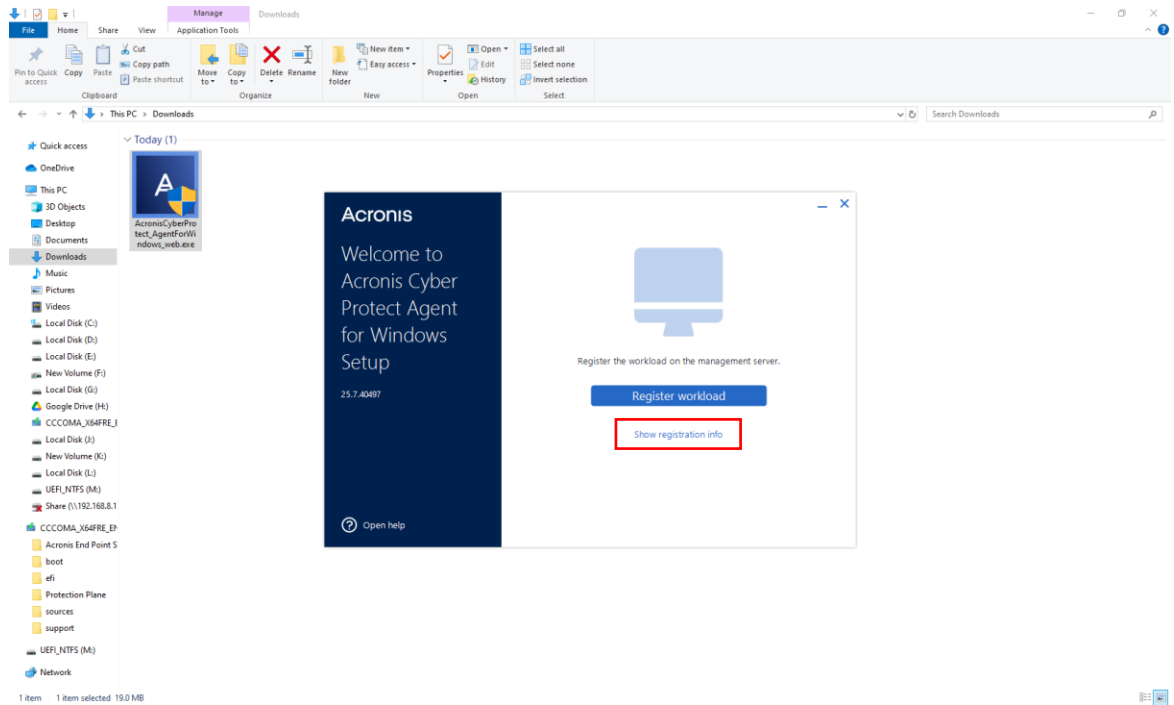

- Download the agent installer from your **Acronis console** (Devices → Add → Download agent).

- Run the installer on the workload.

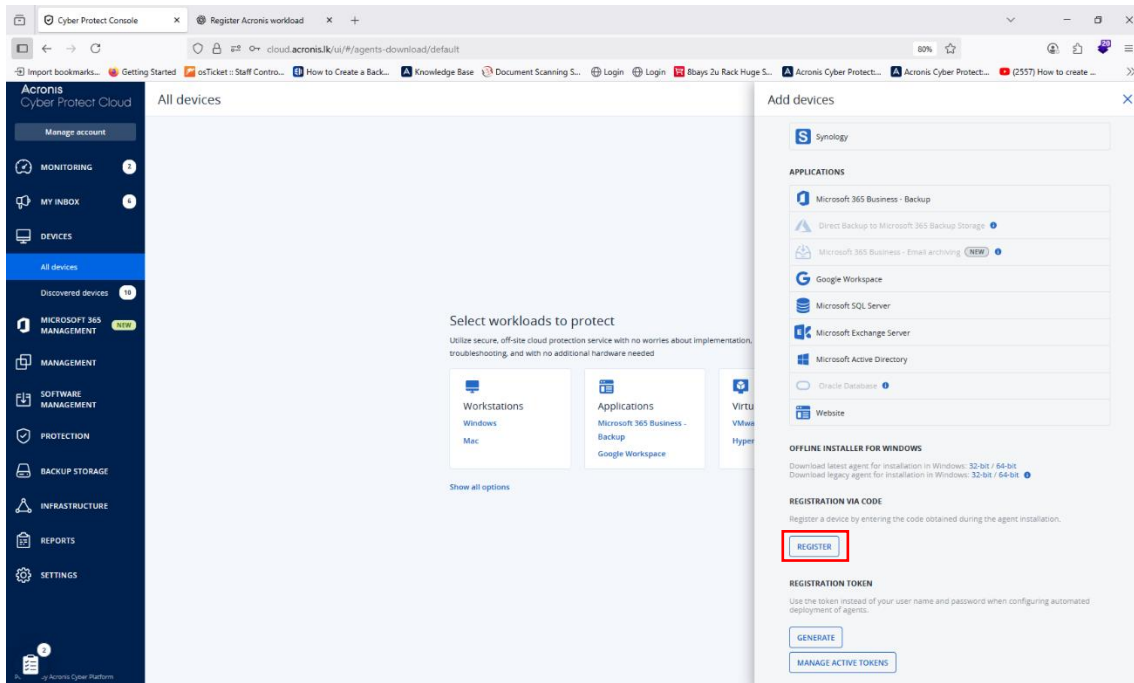

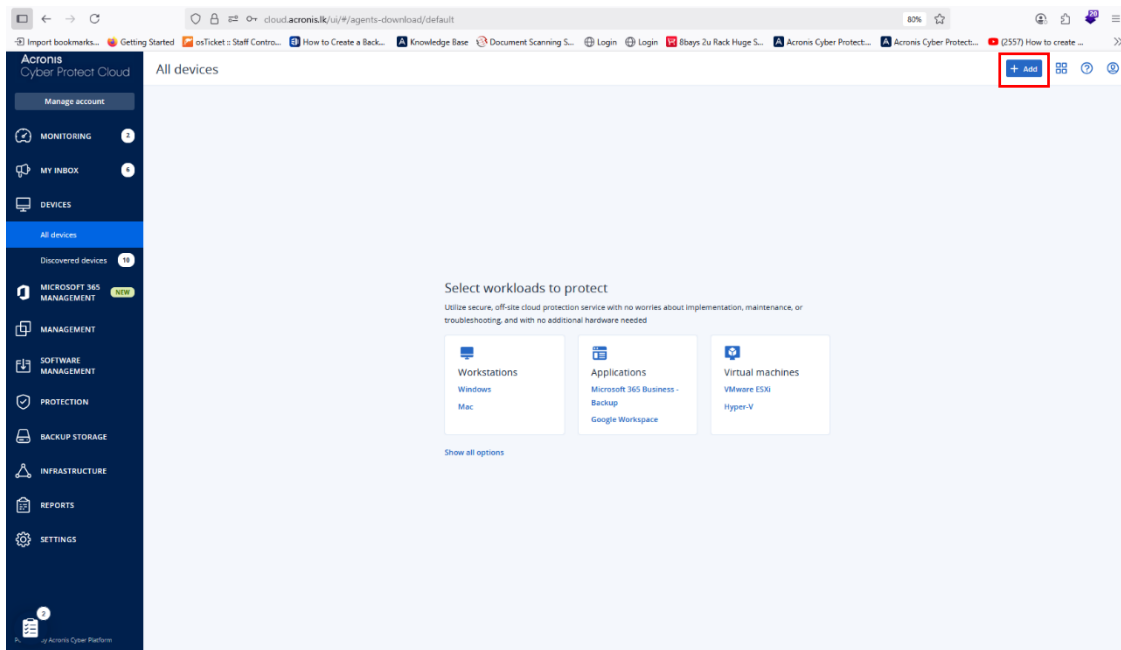

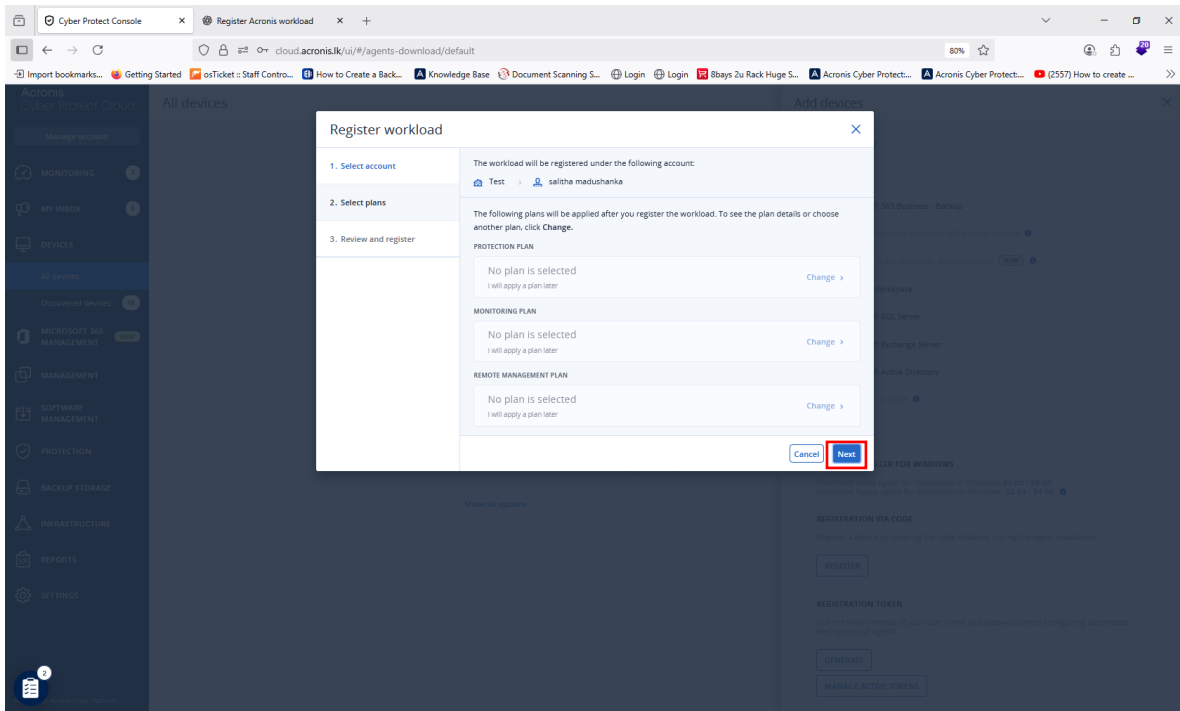

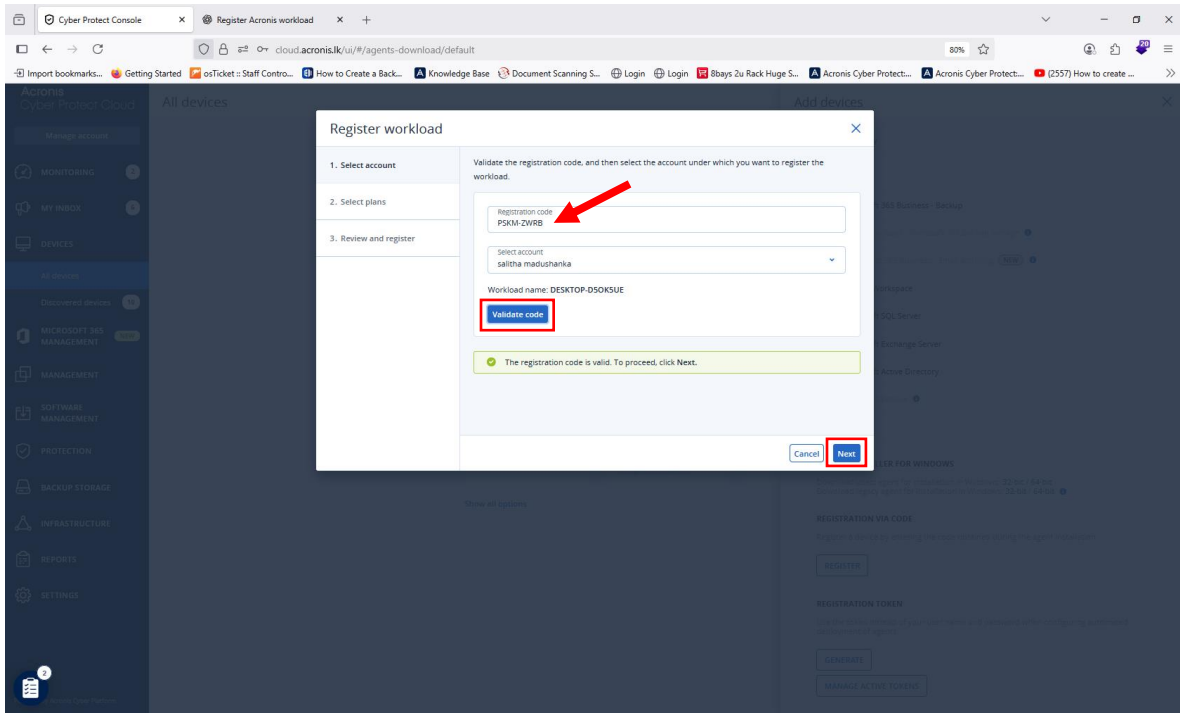

- During setup, choose **“Register later via code”**.
- The installer will finish and display a **registration code** (something like ABCD-1234).
 - You can copy it from the installer screen.
 - If you miss it, you can also find it later in:
 - **Windows:**
C:\ProgramData\Acronis\Registration\registration_code.txt
 - **Linux:** /var/lib/Acronis/Registration/registration_code.txt

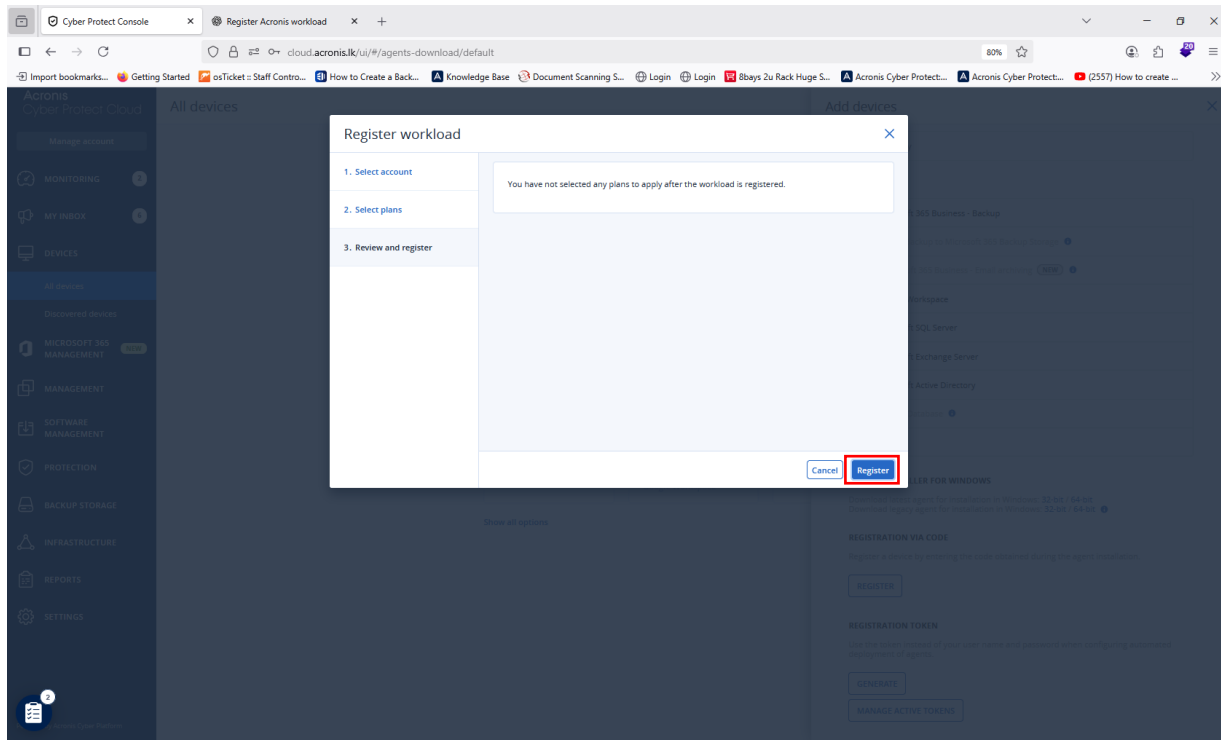

2. Enter the Code in Acronis Console

1. Log in to your **Acronis Management Console (Cloud or On-prem)**.
2. Go to **Devices** → **All devices**.
3. Click **Add** → **Register via code**.
4. Enter the **registration code** from the agent.
5. The workload will appear under your account.

3. Finalize Registration

- Once the workload is listed in **Devices**, you can:
 - Assign it to a tenant/customer (Cloud) or organizational unit (On-prem).
 - Attach a **protection plan**.
 - Confirm it shows **Online**.
